

Clinical Data: Screening Mammogram.
No history of breast surgeries in past.

BILATERAL MAMMOGRAM

Craniocaudal and mediolateral oblique projections of both breasts were obtained.
Both breasts show mixed fibroglandular parenchyma.
No evidence of spiculated masses or densities of an abnormal or suspicious nature are identified.
No architectural distortion is observed.
No evidence of skin thickening or nipple retraction is seen.
There is no evidence of cluster of microcalcifications, suggestive of malignancy.

IMPRESSION:

NORMAL MAMMOGRAPHIC STUDY OF BOTH BREASTS.

BI-RADS 1: NEGATIVE MAMMOGRAM.

RECOMMENDATIONS: ROUTINE ANNUAL SCREENING MAMMOGRAPHY.
